Weatherization

Weatherization measures protect homes and buildings from external elements such as sunlight, precipitation, and wind and reduces energy costs for families by improving the efficiency of their homes. Weatherization measures are delivered to single-family homes, multi-family dwellings, and mobile homes.

Soft Skills (SS)

Soft Skills is a two-day course which trains the participants on job readiness skills and basic computer literacy. Additionally, this class prepares attendants for a successful job interview, how to prepare a resume, including how to dress for the occasion and how to conduct themselves during the interview (required class).

Hazardous Materials

Hazardous Waste Operator Training is formulated for employees working in hazardous waste sites, and need to be certified according to the Occupational Safety and Health Administration (OSHA) regulations.

Lead Abatement

Lead abatement is a method of safety, which reduces lead hazards. If abatement work is done improperly, a greater lead hazard may be created. As a result, it is highly recommended to hire professional contractors to remove lead from building and homes.

Building Science (Online Class)

Building Science uses the “house-as-a-system” concept to study the interaction between mechanical systems, materials and occupants and their effect on energy consumption and efficiency. This course will serve as a preparation for students to continue on to Weatherization and BPI (Building Performance Institute) course work and certification.

Weatherization Boot Camp

A Weatherization Boot Camp is held to expose young men and women to the work entry-level weatherization installers do. Trainees learn how to properly use equipment, remove all types of siding, drill holes, blow insulation and perform air sealing. They are also taught window replacement, window air sealing and door weather stripping.

Transitional Work Experience

Participants are encouraged to incorporate a classroom-style learning experience with hands-on experience

Building Performance Institute (BPI)

BPI is nationally recognized and certified and uses prestigious instructors to train participants on how to diagnose and prioritize energy retrofit work in a home. Participants will learn basic building science concepts, how to use diagnostic equipment, and how to approach energy efficiency projects in new and existing buildings.

BPI Certificate

The BPI Weatherization certification provides the skills and techniques necessary to properly air seal and insulate a home. BPI Certified weatherization technicians are the key to all of the federal, state, and local-level energy retrofit programs. This certification provides you the opportunity to join the workforce of the future and to help you to learn the right way to air seal and insulate a home.
